APPLICATION:

Our magnetic filter grids efficiently remove iron particles and chips - whether caused by abrasion or contamination. The smooth stainless steel cover makes cleaning easy. Our reliable filters are virtually wear-free, extend the service life of your system and reduce maintenance and cleaning costs.

PRODUCT NOTE:

Our filter systems are ideal for use in dry environments such as wood, plastic or recycling plants. The filters are screwed together and can therefore be dismantled. This enables simple and thorough cleaning of the filter, and components can also be replaced. This filter system has a square design.

No stock items, customised production

As an alternative to the standard, we also offer customised solutions:

- " Tightly welded design for use in liquids (e.g. water, coolant)
- " High-quality stainless steel cover for use in food production

" Increase in maximum operating temperature up to 350°C possible

" Production of customised, non-standardised sizes
