A88C-KwB6.6H8.5	88	6.6	12	8,5	550	125	182	80	white

#### PRODUCT NOTE:

These systems are particularly suitable for use on sensitive surfaces. The special rubber coating prevents scratches or discolouration on the surface. The displacement forces are also higher due to the rubber coating.

As an alternative to the standard system, we also offer customised solutions:

- " Other colours for the rubber coating
- " Harder or softer rubber coating

\* The forces have been determined at room temperature on a polished plate made of steel (S235JR according to DIN 10 025) with a thickness of 10 mm (1kg~10N). A deviation of up to -10% from the specified value is possible in exceptional cases. In general, the value is exceeded. The type of application (installation situation, temperatures, counter anchors, etc.) sometimes influence the forces enormously. The values given are for orientation purposes. Let our experts advise you.
