## POS magnets and hook magnets with a rubber coating

### POS magnetic system made from NdFeB, black rubber-coated with a hook or eyelet, round

PRODUCT NOTE:

This POS magnetic system is fitted with a **sturdy hook or eyelet** and offers a practical solution for a wide range of applications. The **protective and robust rubber coating** protects the surface from scratches and abrasion, whilst the **high holding force of the neodymium magnet** ensures a reliable hold. All our complete systems are ideal for delicate materials and guarantee safe and flexible use, for example for securing or hanging objects.

Design your exhibition stand or shop floor with our robust, rubber-coated magnet systems! Thanks to the neodymium magnets on the underside, it adheres securely to ferromagnetic surfaces such as metal walls, steel beams, shelves or whiteboards. Ideal for hanging signs, displays or attaching objects directly to metallic surfaces.

**As an alternative to the standard version, we also offer bespoke solutions:**

» **Other colours for the rubber coating**

» **Harder or softer rubber coating**

* The forces have been determined at room temperature on a polished plate made of steel (S235JR according to DIN 10 025) with a thickness of 10 mm (1kg~10N). A deviation of up to -10% from the specified value is possible in exceptional cases. In general, the value is exceeded. The type of application (installation situation, temperatures, counter anchors, etc.) sometimes influence the forces enormously. The values given are for orientation purposes. Let our experts advise you.
