Universal magnetic door stop for robust applications in industry, offices or cold rooms. Thanks to the round adhesive surface, ferromagnetic objects adhere to it at an angle of 280°.

Simple mounting by screwing to the back of a door or to the wall. A counter plate is not required when steel doors are used.

* The forces have been determined at room temperature on a polished plate made of steel (S235JR according to DIN 10 025) with a thickness of 10 mm (1kg~10N). A deviation of up to -10% from the specified value is possible in exceptional cases. In general, the value is exceeded. The type of application (installation situation, temperatures, counter anchors, etc.) sometimes influence the forces enormously. The values given are for orientation purposes. Let our experts advise you.
